Release notes:
Date: 03/09/17
Version: 6.30

What's new from v.6.23 to 6.30?
This update is for BluePippin users only. Under heavy pulsed-field use with BluePippin, some older electrode arrays can form a salt bridge which may interfere with performance. This update runs a diagnostic routine to check for this. The routine is run automatically at the end of every run. The routine is not visualized by the user, but a warning screen will inform users if an error is detected.
